Environmental Policy

Our Environmental Policy

We recognise that our service inevitably has some impact on the environment, and we are committed to reducing this impact. We strive to continually improve the environmental performance of our activities through our Environmental Management System.

Company Procedures Include:

Preventing pollution, minimising waste, recycling as much as is economically practical, and ensuring the remainder is disposed of responsibly.

Developing and promoting the use of services and technologies to ensure the ecologically and economically sustainable use of energy and natural resources.

As farmers we are very aware of our environmental responsibilities and therefore we have decided that from 2022 for every wedding we attend, we will plant a tree on our farm to help reduce our carbon footprint.

Practical Steps Include:

- Dinks:	Utilising local suppliers wherever possible, to reduce the carbon footprint of transport, and to support the local economy.
- Glasses, straws and menus:	Using 100% recycled and completely compostable consumables.
- Lighting:	Using energy saving electrical technology such as LED lighting.
- Refrigeration:	Monitoring efficiency of our temporary power supplies, and using flexi tubs and ice wherever possible, instead of fridges.
